W A R N I N G

This document contains information affecting the national defense of the United States, within the meaning of Title 18, sections 793 and 794, of the U.S. Code, as amended. Its transmission or revelation of its contents to or receipt by an unauthorized person is prohibited by law.

[REDACTED]
CIA IMAGERY ANALYSIS DIVISION

TRANSPORTATION STUDY LAOTIAN PANHANDLE

This report is a study of the transportation routes of the Laotian Panhandle. The area under study is bounded by Route 9 on the north, 15° 45'N on the south, the Laos, South Vietnam border on the east, and by a line roughly made by route 92 on the west.

The latest available [REDACTED] missions were used in preparing this report. However, in some instances, no clear photographic coverage was available.

Included within this report is a small scale locator map (Figure 1), depicting the general area of interest. Figure 2 is a larger scale map indexing 10 large scale maps (Figures 3-12), which delineate the alignment of the routes studied in this report.

The following four types of transportation routes were reported in this study:

1. Single-Lane Unimproved Roads - natural surface dry weather roads (ie. routes 92 and part of route 922).
2. Vehicle Tracks - wheel tracks made by motor vehicles (ie. eastern part of route 922).
3. Jeepable Trails - trails capable of supporting light motor vehicle (Jeep) traffic.
4. Roads Under Construction - (ie. route 923)
